ZONES Swing decisions & damage — damage on fastballs chase down & in vs RHP (.566 xwOBAcon); misses fastballs heart vs LHP (11% whiff vs 9% league)

Catcher's view, 13 zones (3×3 strike zone + 4 chase quadrants); hitter-relative, so 'in' flips by side. Swing%: darker = swings more (frequency, not quality). Whiff and xwOBA on contact are tinted vs the league rate in the same zone and pitch group (red = better for the hitter). Grey = small sample (<12 pitches, <8 swings, <5 balls in play).

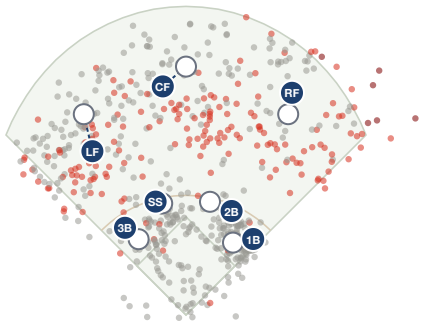

PITCH TYPES Pitch types — best vs curveball (+4.6 RV/100), worst vs ff ride ≥ 18 in (-3.6)

All pitches seen, both hands. RV/100 = hitter run value per 100 pitches (+ = good for him); Lg = league average for the band. Tints vs league band rates; grey rows n < 80. FF bands overlap (velo and ride).

ATTACK How to attack — finish with sweeper down & away vs RHP

Model-preferred pitch (lowest expected xwOBA vs this hitter from a league-average arsenal) and its best location, by count bucket and pitcher hand; second-best and the pitch to avoid with expected xwOBA. Grey line = his actual results on that pitch group in that zone.

COUNTS Count tendencies — swings at 20% of first pitches (league 32%); chases 56% with two strikes (league 41%)

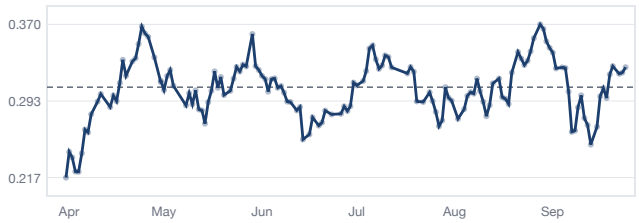

Small numbers = percentage-point difference from league in that count. Chase/whiff tinted vs league (red = better for the hitter); xwOBA on contact tinted vs league. Grey = n < 25 pitches.

Grades. z-score composites → percentile within hitters with ≥1,000 pitches seen → 50 + 10·Φ⁻¹(p), clipped 20–80, shown to the nearest 5. Hit = contact%, xBA, K%, whiff vs FB/BRK. Power = barrel%, EV90, max EV, ISO, hard-hit%. Discipline = chase%, zone-swing minus chase, BB%. Pull-air = pulled fly balls/liners share. Speed = FanGraphs Spd (sprint speed is not in this dataset). vs-pitch grades = hitter RV/100 by pitch group. **Models.** attack plan = situational pitch-type model scored against a league-average arsenal from each hand (this hitter's priors), then the location model's best zone for that pitch; alignment = shift-legal greedy optimizer over his balls in play with a catch-probability fielding model, gain reported 2-fold cross-validated (fit on half his BIP, scored on the other half). Predicted xwOBA gaps are small — the cited zone stats are his actual results. **Caveats.** single season, regular season only; zone cells with small samples greyed; xwOBA ignores park; alignment model is approximate (no runner/game state).
